LBS Series

Light Trailer Air Suspensions

The versatile, compact and durable suspension package for all trailer frames.

- Capacities from 3,500 to 10,000 pounds
- Improved ride protects trailer, cargo and tow vehicle
- Independent wheel suspension provides excellent ride and roll stability with a rugged trailing beam air spring support
- Constant ride height keeps trailer floor at the same height — light or loaded
- Exhaust the air and lower the trailer floor for easier loading and unloading
- Accepts hitch height variations and maintains axle load equalization
- Versatile swing arm and mounting bracket design allows a wide range of mounting heights
- Suspension mounts completely under trailer frame
- Easily retrofitted on existing trailers
- Industry-standard type mounting brackets fit most trailers
- Compact package features protected air springs that have an internal bumper
- Industry-standard wheel spindles and air springs are replaceable
- One-stop ordering — axle and suspension are one assembly
- Shipped complete — no assembly required
- Available with disc or drum brakes — electric or hydraulic actuation
- Air supply and control kits optional
- Durable construction backed by a 5-year limited warranty
