LBS Series

Light Trailer Air Suspensions

The versatile, compact and durable suspension package for all trailer frames.

- 3,500 to 10,000 pound capacities
- Improved air ride protects trailer cargo and tow vehicle
- Independent wheel suspension provides excellent stability with rugged components
- Constant floor height – trailer rides at the same height light or loaded
- Trailer floor lowers for stable loading and unloading along with better step in height
- Air suspensions provide axle load equalization
- One – stop shopping – axle, hubs, brakes, air supply and control kits shipped complete
- Mounts entirely under the trailer frame
- Various mounting heights available
- Industry standard wheel, ends with electric, hydraulic, or disc brakes
- Available on new trailers from major trailer manufacturers or retro-fit for existing trailers

Cargo-Max Wheel Ends Provide

- More inside cargo space than 7, 8, or 10K torsion axles
- Increases the inside to inside dimension of wheel wells
- Use (2) 10K suspensions in place of (3) 7K suspensions and get reduced length wheel wells along with improved turning and reduced tire scrub
